### FRONTEND DEVELOPMENT

Pixel Software solutions | Remote

Jan 2023- Present

- Developed and managed a TypeScript project named Pixel Admin, encompassing API call management, routing, and authentication, ensuring smooth functionality and optimal user experience.
- Spearheaded the creation of UI components and features for the main web application, PixelOne, contributing to its overall usability and aesthetic appeal.
- Designed and implemented email templates to enhance communication efficiency and brand consistency across various platforms.
- Constructed reusable TypeScript components within the company's library, promoting code efficiency and maintainability across projects.
- Cloned and converted the react-date-range-picker library into TypeScript, customizing it fully to suit project requirements, and integrated it into the company's npm package, Pixel Base, expanding its functionality and usability.

### BACKEND DEVELOPMENT

- Collaborated with backend team to create APIs in PHP and store procedures, enhancing data interaction and system functionality.
- Successfully debugged and optimized existing buggy store procedures for PixelOne, ensuring seamless operation and performance improvement.
